

# Therapist Summary — Priya S. (FICTIONAL DEMO DATA) (2025-08-21)

\*Working document for the professional team — not for family distribution.\*

## Relevant passport summary

Communication: literal, precise; does not ask for help spontaneously — needs explicit permission scripts. Triggers: loud machine noise, transitions to unfamiliar places. What works: advance preview, written steps, ear support, scripts.

## Goal progress

Goal | Evidence this session | Status | Recommended next target

|---|---|---|---|

Contributing one idea in group work (assigned role) | Fact-checker role: 1 idea after one prompt, 1 freely at 11:38 | MET  
Using a private help channel instead of struggling silently | Asked a follow-up question in writing after the session | P

\*Session counts: Group-contribution prompts needed: 1 (11:15); Unprompted group contribution: 1 (11:38);  
Written private feedback moments: 1 (11:30 note).\*

## Patterns & trends

Baseline observations (descriptive, correlational — never a verdict). Reassess after ≥3 sessions. See passport Patterns section for the event table.

## Session log reference

Session 2025-08-21 — Contribute one idea in a group setting, with a pre-assigned role, no more than 2 prompts — outcome MET. Approved by K. Wong, School Social Worker (observing; class taught by Ms. Liu).

## Open questions for the team

- Confirm whether the ~45 s and ~30 s pauses correlate with step-transition timing across sessions, or with something else in the environment.
- Validate the self-initiated regulation event (10:15) against the transcript line.

## Recommended next step

Continue the same script for one more session; introduce one new step, then re-check goal progress.
