

Teacher Guide — Marco L. (FICTIONAL DEMO DATA) (2026-08-10)

Draft for professional review — generated by CaseCraft.

Situation: Ask for help when unsure, no more than 2 prompts

Snapshot

Marco L. (FICTIONAL DEMO DATA) communicates best with clear, literal language and one instruction at a time. New or loud situations can be hard; advance warning and written steps help a lot.

What to expect

- May pause before the next step and not ask — waiting briefly, then using the script below, works.
- In a loud environment, may reach for ear support or cover ears. This is self-regulation, not refusal.
- Asks precise questions when unsure; vague answers ("maybe", "we'll see") cause confusion.

What helps

- One instruction at a time, in literal language — no idioms.
- If there is a pause before the next step, wait a few seconds, then use the script.
- Give a written step list when the task has more than two steps.
- Offer the ear support before the machine starts, so it is a choice, not a rescue.

What to avoid

- Abstract or sarcastic phrasing ("hold your horses").
- Repeating a question before waiting ~5 seconds.
- Raising your voice over the machine — the ear support is the tool, not volume.

Language to use (same words as the family report)

SAME WORDS — SAY IT EXACTLY

"Before we tidy up: 5 more minutes, then we tidy the trays together."

Warning signs

- Pauses longer than ~30 seconds before the next step.
- Hands moving toward ears without the ear support nearby.
- Looks at the exit repeatedly during a new activity.

Escalation plan

If the signs above persist, offer the script once, then the break option. Contact:

____ (fill in the school contact) if support is needed.

Session evidence: Help-seeking prompts needed: 2 (09:23, 09:31); Unprompted help-seeking: 1 (10:30); Self-advocacy (ear defenders) without prompting: 1 (10:15).
